

How do you turn a slippery hotel kitchen floor into a safe and comfortable working environment?

The tiled floor behind the kitchen and bars at luxury Greek hotel Amanzoe was proving slippery and unsafe, especially when coupled with soapy water. Hotel management needed a slip resistant solution that wouldn't involve replacing the whole floor.

The problem

Amanzoe, a luxury Greek resort and hotel on the southern coast of Greece, serves hundreds of people each day from their busy kitchen and bar spaces. But hotel management quickly realised that staff were being slowed down by the tiled floor, which became incredibly slippery when wet. They needed a slip-resistant surface with excellent grip that would quickly drain and dissipate any unwanted liquid and food waste. Regular daily cleaning meant the matting also needed to be easy to handle.

The checklist

- ✓ Suitable for use in a hot, humid and wet environment
- ✓ Provides anti-fatigue properties for standing employees
- ✓ Quickly drains both small and large amounts of liquids
- ✓ Lightweight and easy to roll for regular cleaning

Case Study

Flexigrid

The solution

With so many daily spillages, it was vital that the matting could cope with a large quantity of liquid. The perfect solution was Flexigrid, heavy duty matting with an open-grid structure and excellent grip. The diamond-tread surface delivers the highest slip resistance, while the elevated 3/4" height means any hazardous matter can be quickly dispersed and drained.

Flexigrid is also perfect with employees on their feet: the two-layer construction provides comfortable cushioning to help reduce fatigue and boost productivity. The one-piece covering can be loose laid for quick installation, and easily rolled up to facilitate regular cleaning.

"We recommended Flexigrid as we know it's very effective in this kind of situation. The combination of spillages including soapy water and tiled floors doesn't mix well, and there's a significant risk to staff slipping. Flexigrid provides an effective slip resistant and comfortable surface."

Vassilis Beredimas, flooring specialist

Product spotlight: Flexigrid

Extra-aggressive matting capable of withstanding even the toughest environments, Flexigrid is ideal for workplaces where spillages and debris are an issue.

Features:

Diamond cut pattern

Two-layer construction

Proven anti-fatigue properties

Made from flexible PVC

Comes in 16'6" (5m) and 33' (10m) rolls or ramped modules

Benefits:

Certified slip resistance (DIN 51130:RI I, ASTM 1677: 0.6/0.5)

Excellent drainage (DIN 51130:V10)

Boosts productivity

Cut to fit on site, contours to uneven surfaces

Quick to install, easy to clean
